ABSTRACTED-PUB-NO: KR2005052949A

BASIC-ABSTRACT:

NOVELTY - A system and a method for offering a login service with a memory card automatically inputting login information of a web site are provided to make a user not memorize own login ID/password and prevent ID/password leakage on account of spy-ware by storing the login ID/password of the web sites to the memory car and automatically inputting it to the connected web site.

DETAILED DESCRIPTION - The system is equipped with an input means(110), a central processor(120), a network interface(130), a card reader(140), and a personal terminal. The personal terminal includes a login service module linked with a web browser, inquiring login information from the memory card(200) through the card reader, and inputting the inquired login

information

to an input window. The memory card is equipped with a communication part

connecting to the card reader, an application module including a login service

module installed to the personal terminal, and a login information storing

module storing the login information.
